Comparison of uPVC windows with Aluminium & Wood

Particulars	uPVC	Aluminium	Wood
Surface Quality	The surface quality is maintained through out its useful life	Anodizing wears out and corrosion sets it.	Requires regular up keeping
Thermal Insulation	Very good, Heat losses are reduced due to wider profile depth & multi chamber section.	Poor. Being a metal it has a poor thermal insulation, and high thermal conductivity.	Fair
Fire Properties	Excellent	Excellent	Poor
Acoustic Insulation	Excellent, the multi chamber sealed on sophisticated machine hence offer uniform quality control	Poor, they are fabricated locally, hence poor quality and non uniformity.	Fair
Conservation Of energy	Excellent	Requires 7.5 times the energy than that required to manufacture pvc.	
Preservation of natural forest wealth	Excellent	Excellent	Poor
Maintenance	NIL	NIL	Require regular painting & polishing
Durability	Much Stronger due to steel reinforcement profile	Good	Good
Wrapping	Will not warp last for a life time.	Can Warp	Can Warp
